

Month - 2 Tasks

ARTIFICIAL INTELLIGENCE

Tasks By Code-A-Nova

About Us:

CODE-A-NOVA is a skill-driven technology initiative dedicated to delivering practical, project-based internship programs in modern and in-demand technologies. We bridge the gap between academic learning and real-world industry requirements by focusing on hands-on tasks, real-world projects, and professional best practices. Our mission is to empower students with industry-relevant skills, strong portfolios, and the confidence needed to succeed in today's competitive tech landscape.

Instruction

- Update your LinkedIn profiles
- For a Artificial Intelligence internship, you will need to complete at
- your convenience for successful completion of the internship.
- Maintain a separate GitHub repository(name CODE-A-NOVA for all the tasks and share the link of the GitHub repo in the task submission form (it will be given later through email & whatsapp).
- You can refer to online resources such as Google Search and read tutorials. Watch videos(For Help).

About the Internship

- ☒ Completion Certificate
- ☒ Network Opportunity

Do Any 2

- AI Resume Analyzer
- AI Code Assistant / Snippet Generator
- Chatbot with Memory (Context Persistence)

Level: 1(a)

Code-A-Nova

AI Resume Analyzer:

In this project, you will build an AI-powered system that evaluates resumes against a given job description and provides improvement suggestions. Users will upload a resume and paste a job role or description. The system should analyze how well the resume matches the job by identifying relevant skills, missing keywords, and experience alignment. It can generate a match score and offer actionable feedback such as “add measurable achievements,” “include missing technical skills,” or “improve formatting clarity.”

Level: 1(b)

AI Code Assistant / Snippet Generator

This project involves building an AI-powered coding assistant that generates code snippets based on natural language instructions. Users will describe a task like “create a Python function to sort a list” or “write an SQL query to join two tables,” and the system will return relevant code. You can add features such as selecting the programming language, explaining the generated code, and offering multiple solution variations.

Chatbot with Memory (Context Persistence)

In this project, you will create an advanced chatbot that remembers previous user interactions and uses that context to improve future responses. Instead of treating every message independently, the chatbot should store conversation history, user preferences, or key details (like name, interests, or past questions). For example, if a user says “I’m learning Python” earlier, the chatbot can later recommend Python resources without being reminded.

ASK US FOR HELP!

- THE PURPOSE OF THIS INTERNSHIP IS TO LEARN AND GROW
- WE HAVE NO DESIRE TO DICTATE TO YOU. IT IS ENTIRELY UP TO YOU WHETHER YOU SEEK GUIDANCE OR NOT.
- THE GIVEN TASKS MAY SEEM VERY EASY OR VERY DIFFICULT. WE EXPECT YOU TO APPROACH THE TASKS WITH PROFESSIONAL DILIGENCE AND GIVE THEM THE ATTENTION THEY DESERVE."

Important Note

- All interns are required to follow the CODE-A-NOVA LinkedIn and Instagram pages.
- While working on projects, interns should not use AI tools; the purpose is to strengthen core skills and prepare you for industry-level development.
- Each project must be developed independently, enabling you to gain deeper understanding and practical experience.
- You are encouraged to take guidance from resources such as Google, YouTube, and official documentation.
