OBJECTIVE

Computer Science undergraduate building full-stack and AI-powered applications using React, Node.js, Python, FastAPI, and MongoDB. Experienced in REST APIs, RAG pipelines, document processing, machine learning, and backend development.

SKILLS

Languages: Java, Python, JavaScript, SQL, HTML, CSS

Frameworks / Libraries: React, Node.js, Express.js, FastAPI, Tailwind CSS, Pandas, NumPy, Scikit-learn

AI / Data: RAG, ChromaDB, Sentence Transformers, Gemini API, Machine Learning

Databases / Tools: MongoDB, SQLite, Git, Docker

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Expected 2027

Dr. Babasaheb Ambedkar Technological University (DBATU)

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

EXPERIENCE

Python & Machine Learning Intern

Aug 2025 – Sep 2025

Anishree Technologies LLP

- Preprocessed and analyzed datasets using Python, NumPy, and Pandas for machine learning workflows.
- Built and tested classification and regression models using Scikit-learn on real-world datasets.
- Developed and debugged end-to-end data preprocessing and machine learning pipelines, validating model outputs and improving workflow reliability.

PROJECTS

LegalLens — AI Legal Document Analyzer

React, Vite, Node.js, Express.js, MongoDB

- Developed a full-stack platform for uploading legal PDFs and generating AI-powered clause-level risk analysis.
- Implemented a RAG pipeline using document chunking and vector retrieval, enabling context-aware Q&A across 50+ uploaded documents.
- Built Node.js and Express.js backend APIs for PDF processing, document analysis, and MongoDB data persistence.
- Developed a responsive React and Tailwind CSS interface for document upload, analysis results, and interactive Q&A.

Flipzon — AI Customer Support Chatbot

Python, FastAPI, ChromaDB, SQLite, Docker

- Built a RAG-based customer support chatbot serving 36+ knowledge-base articles with 95% intent classification accuracy.
- Designed an embedding-based retrieval pipeline with ChromaDB to retrieve relevant context and ground LLM-generated responses.
- Implemented confidence-based escalation to route low-confidence or frustrated conversations to human support.
- Built an admin panel for live knowledge-base updates with zero-downtime re-indexing and added 15+ automated tests using mocked LLM calls.
